

Level of Care (LOC) Algorithm

Version 2.3

Proposed Level of Care Threshold: 18 points

When testing the algorithm, all indicators should be looked at individually to ensure the highest score is being given to the participant in the category. For example, in the behavioral section an individual may only score 1 in wandering but may score a 3 in delusions. Using the higher score in delusions will give the participant 6 points instead of the 3 they would have scored for wandering.

Safety

Part I – Determine the individual's safety score using the following questions:

- D4 Vision
- J1 Falls
- J3a Problem frequency to move to standing position
- J3b Problem frequency to turn to face opposite direction
- J3c Problem frequency for dizziness
- J3d Problem frequency for unsteady gait

Safety

Part II – After calculating the score in part 1, determine if the individual is age 75 or greater or has been previously institutionalized in the last 5 years in one of the settings outlined below. If so, increase the score as outlined to calculate the final safety score. If they do not have either of the additional risk factors, use the score calculated in part 1.

- B4a Long Term Care Facility
- B4b RCF/ALF
- B4c Mental Health Residence
- B4d Psychiatric Hospital or Unit
- B4e Settings for Persons with Intellectual Disability
